

DINO FIZZY EGG!

Crack open the secrets of chemical reactions whilst bringing a prehistoric pal to life in this egg-citing experiment!

MATERIALS NEEDED:

3 tbsp baking soda

1 tbsp oil

1 tbsp cornstarch

1-2 tsp of water

bowl

food colouring
of your choice

small dino toy

$\frac{1}{4}$ cup vinegar

INSTRUCTIONS:

Step 1

Add all the dry and wet ingredients into the bowl.

Step 2

Mix well and add more water if needed to achieve a wet sand consistency.

Step 3

Grab some of the mixture and place the dino toy in the middle.

Step 4

Grab more of the mixture and cover the dino toy and form an egg shape with your hands.

Step 5

Let the dino fizzy egg dry for 1 or 2 days before using.

Step 6

Place it in a bowl and add vinegar to it bit by bit and watch it fizz!

FUN FACT!

The bubbling reaction absorbs heat from the vinegar, creating a refreshingly cool sensation when you touch the leftover liquid.
